EDUCATION

M.Tech., Robotics Engineering

August 2024 – May 2026

University of Petroleum & Energy Studies, Dehradun, India

- Advisor: Dr. Abhinav Sharma
- Dissertation: “Uncertainty-Aware Trajectory Optimization and Robust Control for Grid-Based Mobile Robots”
- CGPA: 8.9/10

B.Tech., Mechanical Engineering

August 2016 – May 2020

Dibrugarh University Institute of Engineering & Technology, Dibrugarh, India

- CGPA: 7.58/10

EXPERIENCE & INTERNSHIPS

Project Assistant

July 2026 – Present

Wearable Robotics & Control Laboratory, IIT Jodhpur, India

Supervisor: Dr. Saurav Kumar

- Independently assembled and integrated a Powered Prosthetic Leg (Open Source Leg V2) from ground up using its individual mechanical, electrical and electronic components upto its full operational capacity.
- Implemented a time-based gait-cycle trajectory PD controller for coordinated knee and ankle joint actuation of the powered prosthetic leg simulating a human’s walk at 0.4m/s speed using open-sourced human gait trajectory data for control reference. 

Robotics and Automation Intern

January 2026 – June 2026

PRD Robotech Solutions Pvt. Ltd., Noida, India

Supervisor: Mr. Prashant Kumar Dwivedi

- Developed an obstacle detection and safety feature as part of a Robot Fleet Management Project for preventing collisions between differential-drive robots operating in a 3-way grid-map based warehouse environment using fused data from two 270° 2D LiDAR scans.
- Authored a 3-part technical training manual on the use of ROS 2 Diagnostics package for the company engineers, covering its C++ implementation for monitoring ROS 2 topics, services & actions.
- Created a custom Nav2 global planner plugin using the A* path planning algorithm (without replanning) from scratch. Tested the algorithm on Gazebo Ignition and then implemented it on a hardware project.

Systems Engineer

April 2022 – August 2023

Infosys Limited, Bhubaneshwar, India

- Worked on frontend development of customer websites using HTML, CSS, JavaScript, & React.

PROJECTS

Uncertainty-Aware Trajectory Optimization and Robust Control for Grid-Based Mobile Robots

January 2026 – May 2026

M.Tech. Thesis Project, UPES Dehradun

Advisor: Dr. Abhinav Sharma, Mr. Prashant Kumar Dwivedi

- Developed a Stochastic Nonlinear Model Predictive Control (SNMPC) framework on top of the existing Regulated Pure Pursuit (RPP) controller to optimize its lookahead distance parameter by jointly considering the robot’s path tracking error and localization uncertainty instead of relying solely on the velocity-based heuristic of the original RPP algorithm.
- The SNMPC-RPP controller uses a nonlinear path tracking error prediction model, path-relative error covariance propagation and chance constraints for determining an optimal value of the lookahead distance parameter while preserving the rest of the original RPP architecture.
- Validated the controller in ROS 2/Gazebo across multiple operating speeds, achieving reductions of over 40% in cross-track MAE and over 50% in RMSE compared with the baseline RPP controller at 1.5 m/s.

Optimal Control of a Two-Wheeled Self-Balancing Robot Using LQR and Multi-Objective Genetic Algorithm

August 2025 – November 2025

M.Tech. Third-Semester Major Project, UPES Dehradun

Advisor: Dr. Rahul Singhal

- Derived a linearized state-space model for controlling the position and the chassis-tilt angle of a two-wheeled self-balancing (inverted-pendulum) robot, and implemented PID and LQR controllers using MATLAB/Simulink and Simscape Multibody.
- Implemented a Multi-Objective Genetic Algorithm (MOGA) to optimize the LQR weighting matrices Q and R by simultaneously minimizing the Integral Time Absolute Error (ITAE) for position and chassis-tilt angle.
- Compared the performance of the GA-optimized LQR with manually tuned LQR and PID controllers through MATLAB/Simulink simulations, demonstrating faster position convergence while maintaining better chassis-tilt angle stability.

TECHNICAL SKILLS

Programming Languages:	C++, Python, MATLAB
Software & Frameworks:	ROS 2, Nav2, Gazebo, Simulink, Simscape Multibody, SolidWorks
Development & System Tools:	Linux, Git & GitHub, VS Code
Robotics Hardware:	Arduino Uno, Raspberry Pi 5, CubeMars AK80-9 V3.0 Motor, AS5048B Magnetic Encoder
Documentation:	LaTeX, Markdown

RESEARCH INTERESTS

Robotics Fields:	Medical Robotics, Lower Limb Powered Prostheses & Exoskeletons, Aerial Robotics
Control Theory:	Model Predictive Control, Stochastic Control, Optimal Control, Non-Linear Control
Others:	Sensor Fusion, Computer Vision, Mapping, Localization, Applications of Learning Algorithms in Robotics
